

# Hope Art – Drawing the human face

Remember, the face is not a mathematical puzzle but an organic unity!

## Eyes

Don't forget tear duct in inside corner!

and don't forget the double line to show the bottom eye-lid!

The neck is thicker than you think – often wider than the width of both eyes.

The depth of the skull (from front to back) is about the same as its height, the width is about two-thirds the height.
